JUSTI BLEND®

ORTHOCROMATIC ANTERIOR & INTERCUSPAL-OCCLUSAL POSTERIOR

Manufactured by American Tooth Industries

The structure of Justi Blend® anterior hardened plastic teeth creates the vitality of natural teeth. The centrals, laterals and cuspids are manufactured with the same HUE, but each type has a different VALUE. It is this combination of tones blended together in one set that give that natural look.

The semi-translucent body creates the look of depth within the tooth and reflects color from within, as dentine does in a natural tooth.

Justi Blend® Posteriors visually match as closely as possible the cuspids, left and right. It does not match the centrals or the lateral

teeth. It is manufactured with the same HUE but has different VALUES or TONES. Following the studies of U.S. Universities, it was concluded that natural posteriors are darker than the centrals and laterals. American Tooth Industries is following this characteristic.

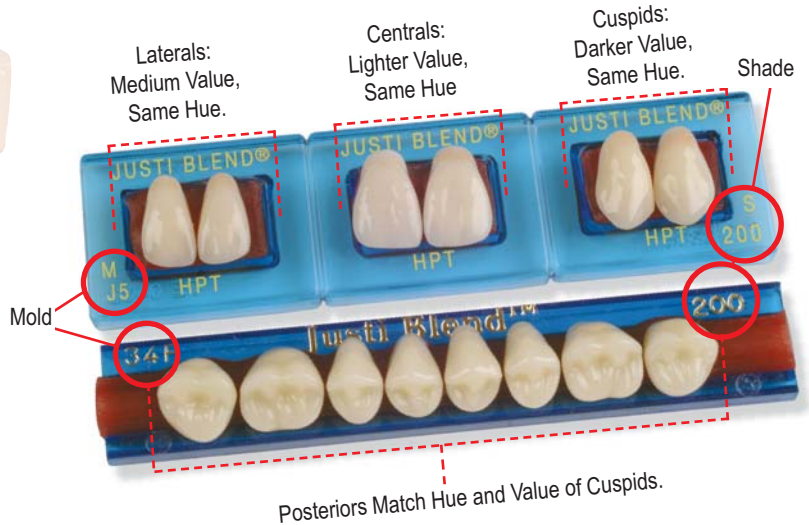

Justi teeth are not only of the highest quality, they represent a real value to you and your business because of this unique feature.

The posterior teeth are available in 18 articulating upper and lower molds in 0°, 10°, 20° and 33°. They are available in anatomical medium, large and long shapes.

For additional information please email us at info@americantooth.com and we will respond promptly. Please include your phone number so a representative can contact you.

We appreciate your continued loyalty.

Justi Blend Shade System

To fully appreciate the delicate natural shading of Justi Blend anterior teeth we offer the Justi Blend extended shade selector. Our straight-forward presentation of a central, lateral and cuspid for each shade is unique. Because each tooth has the same HUE or shade, but with a lower VALUE from central to cuspid, the centrals are slightly lighter than the cuspids and posteriors for the correct dentition shade balance. This sophisticated shade selector design is easy to use and gives superior results. Item # 084-59-0026

As an economical alternative we also offer a traditional style Justi Blend shade guide. Our maxillary centrals shade guide has one shade tab for each of the Justi Blends nine available shades. Item # 084-59-0026/C

Shade Comparison With Major Brands

This shade comparison chart is to be used in selecting approximate color matches. Slight variations occur due to the difference in the texture and character of the respective materials. This chart should be used as an aid to the skill and preferences of the dentist or technician who must make the final shade choice.

Justi Blend Anteriors match the central, lateral and cuspid, right & left respectively. Each central, lateral and cuspid are the same shade in three different tones thereby creating a natural blended effect.

Justi Blend Posteriors match the right or left cuspid body in tone and shade.

Justi Hardened Plastic Teeth comply with ISO #22112: 2005 and ANSI/ADA Specification #15 Published in 1999, identical to ISO Standard #3336:1993

Combo's are packaged in an attractive kit box

Justi Blend® Lingualized Occlusion Combos™

Justi Blend lingualized occlusion combos are offered in six combinations. The use of lingualized occlusion offers the prospect of greater patient comfort and chewing

efficiency. We recommend that the mounting and articulation of these combinations be done by specialists. See page 3 and 4 in this mold chart for other molds.

Hardness & Wear Resistance of Artificial Teeth

The True Fact™

In a discussion of the following factors, an immediate distinction between hardness and wear resistance must be made.

In the world of plastics, hardness or resistance to penetration has little relationship to the wear resistance of the material concerned. An example of this would be a solid rubber tire. Because of its inability to properly handle the forces of stress a solid hard rubber tire will wear faster than a modern inflatable rubber tire. With the advances in modern plastic tooth formulations, Justi Hollywood teeth have been given superior wear resistance without unduly increasing tooth hardness that would sacrifice the resilience of the tooth.

Years of use in the mouth have conclusively proven that Justi Hollywood teeth possess the degree of hardness to withstand the stress of mastication. These plastics have proven themselves "tougher" than previous artificial tooth formulations. This fact is best illustrated by a very low incidence of breakage of Justi Hollywood teeth.

Some early plastic teeth were seen to wear rapidly, and would lose vertical dimension. In many cases where these teeth were exposed to organic solvents or flames they lost their fine properties and wore excessively. Since the introduction of the Justi Imperial® tooth line in 1950, this hazard has been removed. All our teeth are now made with a very tough plastic formulation. With our molecular cross-linked and solvent resistant formula you may confidently expect the following:

1. Justi Hollywood teeth will wear at approximately the same rate as porcelain.
2. When Justi Hollywood teeth are placed opposite to natural teeth they help preserve the natural dentition because of their non-abrasive and resilient formulation characteristics.
3. Using Justi Hollywood teeth opposite gold will cause the Justi teeth to wear slightly faster, thus preserving the restoration

Clinical observation and laboratory testing has shown that when the occlusion is well balanced, little or no wear will be seen.

It is important to remember in selecting teeth that we are substituting for the human tooth. The periodontal membrane and resilience of living tissue are important to the health of the teeth rooted in the bone. Resilient teeth should be placed on restorations that are to be totally supported by the delicate mucous membranes. **Any increase in hardness beyond the point of adequate resilience is at a disadvantage in denture teeth.** By the same token, it may be reasoned that if natural teeth are so constructed by nature as to wear somewhat during the abrasive forces of mastication, there should also be some slight wear in the denture teeth.

It is logical to assume that the wear resistance of artificial denture teeth should be slightly less than that of natural teeth which is firmly supported by the bone of the alveoli.

The True Fact™

No practicing prosthodontist will deny that even with perfect occlusal relationships, some tissue resorption will eventually occur under tissue born dentures. As soon as vertical relationship is reduced, traumatic forces are encountered in the most destructive area, the anterior teeth. If no wear is possible, the trauma produces irritation and greater destruction. **The ability of Justi Hollywood teeth to wear slightly under normal use is of great benefit to patients and their oral health.**

Another liability is encountered when an artificial tooth is placed in opposition to natural teeth or any structure supported by natural teeth. Every effort should be made to prevent traumatic interference between them. If any attrition occurs in such a relationship, it should result in the wear of the artificial tooth. The artificial tooth can be replaced. Under these conditions, unyielding porcelain teeth have caused premature loss of many natural teeth and fixed bridges.

When dentures are fitted, patients should be told of this possibility and the effort you are making to preserve their remaining teeth and tissue.

Justi Hollywood Tooth Senior Grand Master

Justi® Denture Accessories

Justi® Papilla Gauge

Denture Measuring Device

077-65-0013

The permanent position of the papilla can provide great diagnostic value in reproducing tooth position in the construction of a denture. A measuring device that uses this landmark will record, with accuracy, the horizontal and vertical plane to define the position of the incisal edges and the central incisors. These measurements can be recorded, along with the mold and shade, on the patient's records for present or future application.

Artificial Mold Selector Guide®

A Total Tooth Selecting System

077-65-0011

A unique and comprehensive slide chart, designed to aid the dentist and laboratory with the selection of specific Justi tooth molds. It also allows you to set up complete and partial denture cases with 100% assurance of accuracy in your mold selection. This one-of-a-kind tool was designed and patented by Justi. No dental professional should be without one!

Justi® Pocket Lens

077-65-0035

Details, details, details!

You'll love how clearly details can be seen with our new Pocket Lens. The applications around your lab or dental office are limitless.

Technician's Utility Ruler

077-65-0012

The Justi Technician's Utility Ruler will aid the technician in the most common situations: Fabrication of occlusal rims, verification of the maxillary central incisor position, determination of normal or cross-bite situations, determination of posterior molds, measuring for the six anterior teeth and related information. Comes complete with instructions for use.

Justi® Utility Template

077-65-0041

The Justi Template is a quality stainless occlusal plane guide tool specifically designed for the needs of today's productive technicians for tooth set-up and occlusal bite rim fabrication. A guide relation of 80 degree angled sides are calibrated with a millimeter rule guide measuring 0 to 70 mm with markings at 18 and 22 mm.

Justi® Caliper

077-65-0034

This compass style measuring device can be used for measuring parameter landmarks on a working model or facial dimensions to aid in determining tooth mold selection.

Justi® Crown Gauge

077-65-0036

A traditional stainless crown caliper which can also be used for measuring the palatal or buccal flange thickness on an acrylic denture base. It measures in 1/10 mm increments up to 10 mm.

With Justi® Hollywood Teeth® YOU CAN accomplish the following functions with ease

CHEWING

An act of crushing or grinding with teeth

CRUSHING

Break into fine pieces by grinding, pounding or pressing down hard.

CUTTING

An act of separating, opening or remove with something sharp

CRUNCHING

An act of crushing noisily with teeth

TEARING

An act of pulling apart by force

BREAKING

An act of dividing into two or more pieces

BITING

An act of biting into something in order to eat it. A piece cut off by biting.

CHOPPING

An act of cutting by hitting with something sharp

SQUEEZING

An act of pressing down with force

RIPPING

An act of biting into something in order to rip strands off.

JUSTI BLEND CUSTOMIZED SHADE GUIDES AND JUSTI DENTURE ACCESSORIES

Justi Blend® Customized Shade Guides

To improve shade communications, and provide an outstanding marketing tool to dental labs and clinics, Justi has created the Customized Shade Guide complete with the Justi® Eterna® Shield. U.S. Patent # 5,257,931.

With a minimum order of 30 shade guides, customized shade guides can be imprinted with your name and a marketing message at the regular shade guide price. Customized shade guides allow the option of tailoring both the front and back message areas and the number of shade tabs. The message areas are free form and can contain name, address, shade information, and marketing message limited only by imagination and the available text space. The number of shade tabs is customer selectable. A customized shade guide can have between 1 and the maximum 9. (Example: To order a 6 tab shade guide from a standard Justi Blend shade guide, which has 9 shades, on the order form simply specify the 6 shade tabs desired).

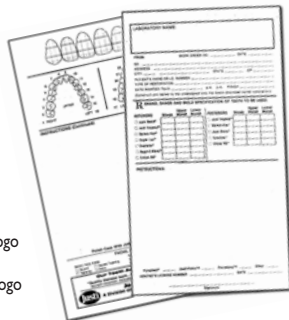

Now you can build name recognition for your lab and make more money selling Justi Blend teeth in your denture, overdenture and partial cases. It is recommended that the shade guide be disinfected with a Gluteraldehyde based Solution.

GROUP/ITEM #	DESCRIPTION
084-59-0026/C	Justi Blend Maxillary Centrals Shade Guide in 9 shades

IMPORTANT - To request an order form for customized shade guides call ATI's order desk at 800-235-4639.

Rx Pads

Remind your customers about you each time they write a prescription. Customized prescription pads are a simple and effective way to increase your business.

GROUP/ITEM #	DESCRIPTION
077-65-0005	Prescription Pads (Our design/Your Logo 100 pads (20 sheets/pad)
077-65-0005	Prescription Pads (Your design/Your Logo 100 pads (20 sheets/pad)

Instructions for use of synthetic resin teeth

Note: If you wish written instructions for obtaining optimum results with our teeth, contact: JUSTI PRODUCTS: A Brand Division of American Tooth Industries, 1200 Stellar Drive, Oxnard, CA 93033-2404, Toll Free (800) 235-4639, California (805) 487-9868, Fax (805) 483-8482. Also available on the web at www.americantooth.com

Certificate of Authenticity / Warranty Card

Prosthetic Appliance; Quality Assurance Inserts for Justi tooth lines. These handy Certificates, which now includes the Justi Warranty Card, are available for you to prove to your patients that the finest quality of teeth have been used in the fabrication of their prosthetic appliance.

GROUP/ITEM #	DESCRIPTION
077-65-0021	Certificate of Authenticity/ Warranty Card 20 sheets per pack

Educational Manuals and Brochures

The denture specialist can use the following selection of marketing brochures, manuals, and specification pamphlets as educational and marketing tools for the dental office and laboratory. (1) Customize shade guide options pamphlet (2) The House Brand Concept marketing brochure (3) Patient Information, dentures, overdentures & removable partials pamphlet. (4) The Justi Hollywood Teeth complete denture tooth manual (5) The Justi Hollywood Teeth test results against ANSI / ADA / ISO specification brochure.

Denture Bags

Place Prosthodontic and/or Orthodontic appliances in these strong, transparent bags with your choice of disinfecting solution prior to a hermetic seal. Bags available with or without personalized imprint.

GROUP/ITEM #	DESCRIPTION
077-65-0050	1000 Denture Bags (no imprint)
077-65-0051	5000 Denture Bags (imprinted)

Kroma Tabs

Justi Products invented this accessory to be used in the patient's mouth as a neutral background for choosing the correct shade from the Justi teeth shade guides. The neutral blue background enables the eye to focus on the shades, and not be distracted by surrounding colors. U.S. Patent #5,257,931.

GROUP/ITEM #	DESCRIPTION
086-51-0415	Kroma Tabs 50/Pk.

Justi Color Neutralizer

Justi Products invented this accessory to be used as a neutral background for choosing the correct shade from Justi teeth shade guides. The neutral blue color enables the eye to focus on the shades without distraction from surrounding colors.

It does not match the value of the centrals or the lateral teeth. It is manufactured with the same HUE but has different VALUES or TONES. Following the studies of U.S. Universities, it was concluded that natural posteriors are slightly darker than the centrals and laterals. American Tooth Industries is following this characteristic.</p> <p>Product: <u>Justi Blend Multi-Blend Hardened Plastic Teeth</u></p> <p>Date: <u>5-20-09</u></p> <p>Prepared By: <u>ATI Research & Development Dept.</u></p>	<p>9 AMERICAN SHADES LIGHT TO DARK 200, 202, 204, 206, 208, 210, 212, 214, 216</p> <p>27 UPPER ANTERIOR MOLDS</p> <p>8 LOWER ANTERIOR MOLDS</p> <p>18 UPPER & 18 LOWER POSTERIOR MOLDS</p> <p>POSTERIOR AVAILABLE IN 33°, 20°, 10° AND 0° OCCLUSAL FORMS</p> <p>MULTI LAYERED BLENDED PLASTIC TEETH</p> <p>BIOFORM-TYPE UPPER & LOWER ANTERIOR MOLDS</p> <p>MOLD CHART & SAMPLES AVAILABLE</p> <p>WORKING MOLD GUIDE AVAILABLE</p> <p>HOUSE BRAND PACKAGE AVAILABE</p> <p>HIGHLY CROSS-LINKED INTERSECTIONAL POLYMER NETWORK</p> <p>MOLD SELECTOR SLIDE CHART AVAILABLE</p>	<p>*JUSTI IMPERIAL TEETH COMPLY WITH ISO #22112:2005</p> <p>MANUFACTURED IN THE U.S.A.</p> <p>CROSS-LINKED VACUUM PROCESSED WEAR RESISTANT SOLVENT RESISTANT FLUORESCENT PHOTOGENIC</p> <p>100% BONDABLE TO METHYL-METHACRYLATE DENTURE BASE MATERIALS, PREVENTS STAIN BUILD-UP UNDER GINGIVAL MARGIN</p> <p>UNIQUE CHARACTERIZATION CENTRALS, LATERALS, & CUSPIDS EACH HAVE A SLIGHT SEMI-TRANSLUCENT TONE</p> <p>A GREAT VALUE!
