

Since 1864

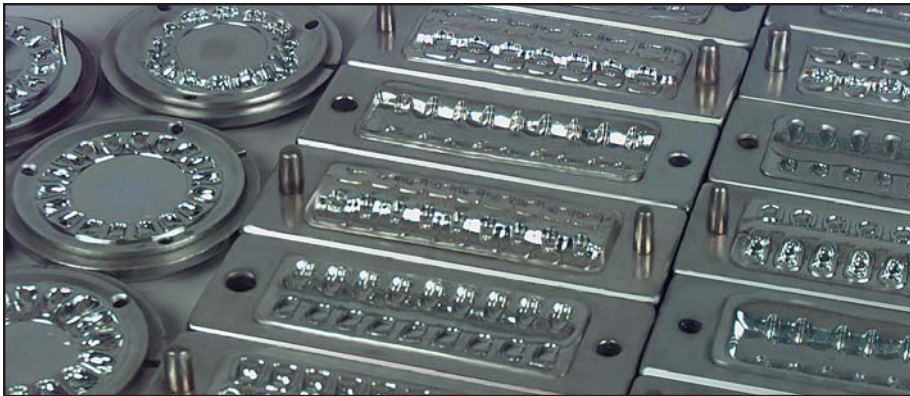

Justi...the Inventors of Hardened Multi-layered Plastic Teeth.

Justi is the only tooth manufacturer in the world to produce such a large variety of maxillary and mandibular anterior molds in six unique tooth lines. We manufacture only multi-layered, parallel, opalescent hardened plastic teeth. Justi teeth are made with an Intersectional Polymer Network, are highly cross-linked, wear and stain resistant, fluorescent, photogenic and no diatoric retention is necessary. 100% bondability is possible with methyl methacrylate denture base materials. Justi hardened plastic teeth comply with ISO #22112:2005 and ANSI/ADA Specification #15 published in 1999, identical to ISO 3336:1993.

Justi...the Originator and World Leader in Acrylics

Our powder and liquid manufacturing facility has been formulating acrylic polymers and monomers specifically for dental, clinical and laboratory use for more than 55 years. Our expertise at adjusting cure times and matching colors makes Justi the unique source for materials to fabricate dental prosthetic cases. In addition, all of the specialty items listed in this catalog are manufactured with the same craftsmanship and quality of Justi polymers and Justi teeth.

Using the tools of their forebears, the human eye and hand, our craftspeople carry on the Justi tradition of excellence.
