

SILICONES & ALGINATES

Since 1960

Established in 1960 in the city of Torino, in the north-western part of Italy, Major specializes in manufacturing high quality dental materials for laboratories and dental clinics.

The product line for the dental laboratories includes artificial teeth in acrylic resin and composite materials; materials for crowns and bridges; acrylic resins for dental prosthesis; abrasives, as well as small equipment for laboratory use. Products for dental clinics include a complete range of dental impression materials (silicones and alginates). These products are manufactured in the Major factory in Moncalieri, near Torino, and are certified according to the CE regulation of the European Union. All our materials are selected in order to exceed the requirements of international standards, and are carefully controlled in order to guarantee a constant level of quality. The mission of Major is to provide the operators of the dental sector with reliable and innovative high quality materials. The above strategy is realized with the selection of qualified personnel, the use of innovative production techniques, as well as through a continuing investment activity in research and development, in cooperation with laboratories and external research institutes.

Major's attention to the quality of the products is also reflected in the characteristics of the distributing organization: Major's products are commercialized all over the world through a selected network of dealers in order to ensure a high level of service to the customers and the end users of the products.
