GALETTI ARTICULATOR

with Mechanical Fixation of Models

Precision Made ■ Original Type ■ Patented

- Solid construction. Made of metal alloy casting.
- Easy to use, quick fixation of model.
- From chairside to patient - immediate adjustment of the occlusal & correct simulation of central relation.
- All anatomical movements possible.
- Correct occlusion with maximum precision.
- Perfect occlusal-articular balance to prevent cuspidal interferences and to obtain a balanced prosthetic appliance.
- For the dentist, orthodontist and oral surgeon, the Galetti Articulator creates an impressive display that is quick and easy to use for case presentations. It can also be used for study models and has many additional applications for partial and full denture work.

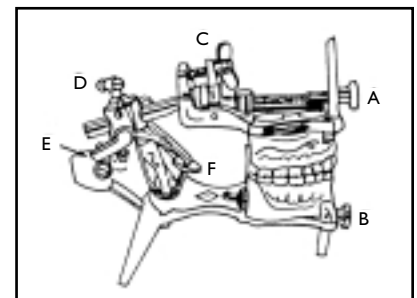

GRP/ITEM #	DESCRIPTION
001-19893	Galetti Articulator, Complete
001-20071	Galetti Horizontal Bolt, Lower
001-20072	Galetti Front Model Model Holding Screw
001-20120	Retaining lever, Galetti Art I pair
